

2017 Consumer Confidence Report Data GREENDALE WATERWORKS, PWS ID: 24105719

Water System Information

If you would like to know more about the information contained in this report, please contact Mark S Uecker at (414) 423-2133.

Opportunity for input on decisions affecting your water quality

The Village Board of Trustees meet the first and third Tuesdays at Village Hall, 6500 Northway Greendale, Wisconsin at 7 p.m.

Health Information

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune systems disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

Source(s) of Water

Source ID	Source	Depth (in feet)	Status
1	Purchased Surface Water		Active

Purchased Water

PWS ID	PWS Name
24101000	MILWAUKEE WATERWORKS

To obtain a summary of the source water assessment please contact, Mark S Uecker at (414) 423-2133.

Educational Information

The sources of drinking water, both tap water and bottled water, include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally- occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which shall provide the same protection for public health.

Definitions

Term	Definition
AL	Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Level 1 Assessment	A Level 1 assessment is a study of the water system to identify potential problems and determine, if possible, why total coliform bacteria have been found in our water system.

Term	Definition
Level 2 Assessment	A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine, if possible, why an E. coli MCL violation has occurred or why total coliform bacteria have been found in our water system, or both, on multiple occasions.
MCL	Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
MCLG	Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MFL	million fibers per liter
MRDL	Maximum residual disinfectant level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MRDLG	Maximum residual disinfectant level goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
mrem/year	millirems per year (a measure of radiation absorbed by the body)
NTU	Nephelometric Turbidity Units
pCi/l	picocuries per liter (a measure of radioactivity)
ppm	parts per million, or milligrams per liter (mg/l)
ppb	parts per billion, or micrograms per liter (ug/l)
ppt	parts per trillion, or nanograms per liter
ppq	parts per quadrillion, or picograms per liter
TCR	Total Coliform Rule
TT	Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.

Detected Contaminants

Your water was tested for many contaminants last year. We are allowed to monitor for some contaminants less frequently than once a year. The following tables list only those contaminants which were detected in your water. If a contaminant was detected last year, it will appear in the following tables without a sample date. If the contaminant was not monitored last year, but was detected within the last 5 years, it will appear in the tables below along with the sample date.

Disinfection Byproducts

Contaminant (units)	Site	MCL	MCLG	Level Found	Range	Sample Date (if prior to 2017)	Violation	Typical Source of Contaminant
HAA5 (ppb)	SAMPLE 1	60	60	4	3 - 4		No	By-product of drinking water chlorination
TTHM (ppb)	SAMPLE 1	80	0	9.7	6.4 - 11.5		No	By-product of drinking water chlorination
HAA5 (ppb)	SAMPLE 3	60	60	4	3 - 5		No	By-product of drinking water chlorination
TTHM (ppb)	SAMPLE 3	80	0	10.2	6.4 - 12.1		No	By-product of drinking water chlorination
HAA5 (ppb)	SAMPLE 4	60	60	4	3 - 5		No	By-product of drinking water chlorination
TTHM (ppb)	SAMPLE 4	80	0	9.8	6.5 - 11.6		No	By-product of drinking water chlorination
HAA5 (ppb)	SAMPLE 6	60	60	3	2 - 4		No	By-product of drinking water chlorination
TTHM (ppb)	SAMPLE 6	80	0	9.9	8.1 - 12.8		No	By-product of drinking water chlorination

Inorganic Contaminants

Contaminant (units)	Action Level	MCLG	90th Percentile Level Found	# of Results	Sample Date (if prior to 2017)	Violation	Typical Source of Contaminant
COPPER (ppm)	AL=1.3	1.3	0.0240	0 of 30 results were above the action		No	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching

Contaminant (units)	Action Level	MCLG	90th Percentile Level Found	# of Results	Sample Date (if prior to 2017)	Violation	Typical Source of Contaminant
				level.			from wood preservatives
LEAD (ppb)	AL=15	0	0.70	0 of 30 results were above the action level.		No	Corrosion of household plumbing systems; Erosion of natural deposits

Unregulated Contaminants

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. EPA required us to participate in this monitoring.

Contaminant (units)	Level Found	Range	Sample Date (if prior to 2017)
NAPHTHALENE (ppb)	1.82	0.27 - 5.60	

UCMR testing was done in 2014. The results are printed later in the report.

Health effects for any contaminants with MCL violations/Action Level Exceedances

Contaminant Health Effects

LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from material and components associated with service lines and home plumbing. Greendale Waterworks is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>

Additional Health Information

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Greendale Waterworks is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead

Presence of Other Contaminants

Substance	Range of Values
	Detected
Aldehydes, Total	< 0.5 - 7.2 mg/L
Ammonia ¹ , as N	0.33 - 0.54 mg/L
Boron ²	0.025 mg/L 0.017 - 0.041
Bromide	mg/L
Bromochloroacetonitrile	0.5 - 1.0 µg/L
Calcium	34 mg/L
Chloropicrin	< 0.5 - 1.4 mg/L
Dibromoacetonitrile	0.7 - 1.3 µg/L
Dichloroacetonitrile	< 0.5 - 0.9 µg/L
Dichloropropanone	< 0.5 - 0.5 µg/L
Erucylamide	6.8 µg/L
Gallium	0.001 mg/L
Isophorone ³	0.12 µg/L
Lithium	2.3 µg/L
Magnesium	12 mg/L
Magnesium Hardness	43 - 60 mg/L
Phosphate, as PO ₄	1.82 - 2.39 mg/L
Potassium	1.4 - 1.7 mg/L
Rubidium	1.1 µg/L
Silica	1.95 - 2.0 mg/L
Sodium	9.5 - 14.4 mg/L
Total Organic Carbon	1.2 - 1.4 mg/L
Trichloropropanone	< 0.5 - 0.6 µg/L

The table below shows the unregulated substances detected in Greendale’s drinking water during 2017. There is no known adverse health effect from these substances in drinking water at these levels.

Contaminant (units)	Action Level	MRL	Rang ug/L	Average ug/L	Violation	Typical Source of Contaminant
Chlorate	NR	20	30.674-51.369	43.571	No	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
Chromium	NR	0.2	0.219-0.548	0.3075	No	Corrosion of household plumbing systems; Erosion of natural deposits
Chromium-6	NR	.03	0.143-0.21	0.186	No	Corrosion of household plumbing systems; Erosion of natural deposits
Molybdenum	NR	1	1.001-1.019	1.01	No	Corrosion of household plumbing systems; Erosion of natural deposits
Strontium	NR	.03	113.926-120.945	116.1325	No	Corrosion of household plumbing systems; Erosion of natural deposits
Vanadium	NR	0.2	0.221-0.268	0.249	No	Corrosion of household plumbing systems; Erosion of natural deposits

Information on Monitoring for Cryptosporidium and Radon

Greendale Water Works system did not monitor our water for cryptosporidium or radon during 2017. We are not required by State or Federal drinking water regulations to do so.

Purchased Water

Our water system purchases water from MILWAUKEE WATERWORKS. In addition to the detected contaminants listed above, these are the results from MILWAUKEE WATERWORKS.

PRIMARY DRINKING WATER STANDARDS

<u>Substance</u>	<u>Ideal Goals (MCLG)</u>	<u>Highest Level Allowed (MCL)</u>	<u>Median Value</u>	<u>Highest Level Detected</u>
Alicarb Sulfoxide (µg/L)		4	0.3	0.3
Arsenic (µg/L)	0	10	0.4	0.5
Atrazine (µg/L)	3	3	0.03	0.03
Barium (mg/L)	2	2	0.019	0.019
Bromate (µg/L)	0	10	3	9
Chlorate (µg/L)	NA	NR	117	205
Chlorine, total (mg/L) (Chloramines)	MRGLG =4	MDRL =4	1.03	1.51
Chlorite (mg/L)	0.8	1	0.003	0.007
Chromium, Hexavalent (µg/L)	NA	NR	0.19	0.2
Chromium, Total (µg/L)	100	100	0.6	0.6
Copper (mg/L)	AL = 1.3	AL = 1.3	0.004	0.006
Fluoride (mg/L)	4	4	0.58	0.73
Haloacetic Acids (9), total (µg/L)	NA	60	4.2	9
Individual Haloacetic Acids:				
Bromochloroacetic Acid			0.9	1.2
Bromodichloroacetic Acid			1	2.1
Chlorodibromoacetic Acid			<0.9	1.2

Dibromoacetic Acid			0.52	0.83
Dichloroacetic Acid			2.0	2.4
Monobromoacetic Acid			0.42	0.77
Trichloroacetic Acid			0.76	0.94
Heterotrophic Plate Count (HPC)	NA	TT	Met requirement	Met requirement
Nitrate, as Nitrogen (mg/L)	10	10	0.33	0.44
Nitrate and Nitrite, Total, as Nitrogen (mg/L)		10	0.330	0.442
Nitrite, as Nitrogen (mg/L)		1	0.002	0.013
Perchlorate (µg/L)	NA	Regulation Pending	0.12	0.12
Selenium (µg/L)	50	50	0.5	0.5
Strontium (µg/L)		NR	110	110
Radionuclides (pCi/L) (2015)				
Individual Radionuclides:				
Alpha emitters (Gross Alpha Particles, excluding Ra + U)		15	1.86 ± 2.00	3.42 ± 1.99
Gross Alpha Particles	NR		2.03 ± 2.0	3.6 ± 2.0
Beta/photon emitters (Gross Beta Particles)		50	3.9 ± 1.9	4.0 ± 1.9
Radium 226		5	0.16 ± 0.16	0.20 ± 0.18
Radium 228		5	1.05 ± 0.58	1.4 ± 0.7
Radium, combined (226 + 228)		5	1.20 ± 0.60	1.51 ± 0.71
Uranium (µg/L)	0	30	<0.0010	<0.0010
Trihalomethanes, total (µg/L)	NA	80	6.9	17
Individual Trihalomethanes:				
Bromodichloromethane			3.2	4.9
Bromoform			0.35	0.44
Chloroform			3.7	5.6
Dibromochloromethane			2.0	2.8
Turbidity (NTU)	NA	<0.3 (95% of the time)	0.02	0.24 (1 day maximum)

SECONDARY DRINKING WATER STANDARDS

<u>Substance</u>	<u>Ideal Goals (MCLG)</u>	<u>Highest Level Allowed (MCL)</u>	<u>Median Value</u>	<u>Highest Level Detected</u>
Aluminum (mg/L)	0.2	0.05-0.20	0.042	0.045
Chloride (mg/L)	250	250	14.7	21.5
Copper (mg/L)	AL = 1.3	AL = 1.3	0.004	0.006
Fluoride (mg/L)	4.0	4.0	0.58	0.73
Iron (µg/L)	300	300	123	126
Manganese (µg/L)		50	0.3	0.3
Odor (threshold odor number)		3	1	1
pH (-log[H*])	NA	6.5-8.5	7.64	7.79
Silver (µg/L)		50	0.3	0.3
Sulfate (mg/L)		500	26.5	27
Total Dissolved Solids (mg/L)	500	500	179	204

Our water system purchases water from MILWAUKEE WATERWORKS. In addition to the detected contaminants listed above, these are the results from MILWAUKEE WATERWORKS. To see Milwaukee Waterworks entire 2017 Consumer Confidence report, please click on this link:
